

Clinton Cochrane

Senior Software Engineer | React | C#/.NET | AWS

clinton.edward.cochrane@gmail.com | (318) 550-8495 | San Francisco Bay Area

PROFESSIONAL SUMMARY

Senior software engineer with 10+ years building, modernizing, and supporting full-stack applications across e-commerce, emergency management, energy, and small-business systems. Extensive professional experience with C#/.NET and modern web development, including React/TypeScript, REST APIs, SQL, and AWS. Strong in legacy modernization, debugging, system design, client collaboration, and translating business requirements into maintainable software.

TECHNICAL SKILLS

Core: C#, ASP.NET Core, React, TypeScript, JavaScript, SQL, Git

Cloud & Delivery: AWS, Azure DevOps, CI/CD, Render

Additional: Entity Framework Core, Next.js, Vue.js, Python, SQL Server, PostgreSQL, REST APIs, JWT/API authorization

EXPERIENCE

Clinton Cochrane Computational Consulting | Independent Software Engineer Jul 2024 - Present
Bay Area, CA

- Build and deploy custom software for small businesses, owning requirements discovery, system design, implementation, deployment, and feedback-driven iteration.
- Roast66 Coffee: designed and built a deployed React + ASP.NET Core + PostgreSQL ordering and administration platform; used JSON/JSONB for highly flexible drink configurations while keeping stable business entities relational.
- Little Town Bakes: designed and built a deployed Next.js ordering and inventory system with admin-controlled availability, atomic inventory checks at checkout, sold-out feedback, and pickup/order tracking.

Luminos Labs | Tech Lead

Jul 2023 - Apr 2024

Los Angeles, CA

- Led a 7-person engineering team delivering the Coastal Country e-commerce platform while remaining hands-on with C#/.NET APIs, checkout services, integrations, and production fixes.
- Replaced a payment integration that became unavailable shortly before Black Friday, implementing and validating a new Clover checkout flow under a tight production deadline.
- Partnered with the client on the Algolia search rollout, translating product-discovery needs into requirements, testing API behavior, and validating search relevance.
- Reviewed code, paired with engineers on unfamiliar problems, and guided architecture and implementation decisions while coordinating delivery.

Dynamis | Senior Software Engineer

May 2022 - Jun 2023

Fairfax, VA

- Built emergency-management and team-coordination software using React and C#/ASP.NET Core for federal and international agency users, centered on shared live maps, incident tracking, and team messaging.
- Worked with large GIS datasets and real-time map updates, balancing responsiveness and data volume on constrained government hardware.
- Designed for intermittent field connectivity, synchronizing application state after reconnect so teams could recover cleanly from poor 2G/3G connections.
- Used Entity Framework Core, dependency injection, async/await, SQL Server, REST APIs, authentication, and secure data handling across backend services.

EXPERIENCE CONTINUED

DSR | Software Developer

Sep 2021 - Apr 2022

Bartlesville, OK

- Maintained and modernized a 20-year-old PHP/LAMP provisioning platform supporting AT&T workflows, diagnosing and resolving more than 1,000 production defects.
- Replaced duplicated page-specific logic with a factory-based, data-driven design, reducing repeated maintenance across similar provisioning workflows.
- Created Laravel examples and modernization patterns to guide future migration of legacy functionality.
- Authored extensive technical documentation covering application behavior, setup, troubleshooting, and debugging.

ConocoPhillips | Software Engineer / Software Engineering Intern

May 2016 - Feb 2021

Bartlesville, OK

- Joined as a software engineering intern in 2016 and transitioned to a full-time software engineer in 2018 after graduation; built internal applications and technical tools using C#, .NET, SQL Server, Python, and JavaScript.
- Led early .NET Framework-to-.NET Core migration enablement by researching Microsoft guidance, converting a reference application, documenting patterns, training developers, and serving as a technical point of contact during adoption.
- Led evaluation and early adoption of React as the replacement for AngularJS, building reference applications, internal training, and implementation guidance for other developers.
- Configured AWS resources and provided Tier 2 AWS support for internal development teams, debugging setup/application issues and improving runbooks and documentation; worked with EC2, S3, DynamoDB, Lambda, API Gateway, SQS, CloudFront, Route 53, Glacier, and Snowball.
- Automated application build and deployment workflows with AWS CI/CD tooling and authored internal cloud-development training materials.
- Beta-tested AWS DeepLens for industrial computer-vision use cases, including natural-gas flare monitoring and remote-site security classification of people, vehicles, animals, and environmental motion.
- Built scientific and business applications for internal clients, including calculations, simulations, data visualizations, workflow automation, and a C# report catalog.

Missouri State University | Student Network Technician -> Web Developer

2014 - 2017

Springfield, MO

- Supported campus networking across Cisco/Juniper switching, routing, Wi-Fi, cabling, hardware installation, troubleshooting, and Level 2 user support.
- Promoted into web development, building .NET tools for the networking team including an interactive campus map with network-closet photos, a live bandwidth dashboard, and a traffic-distribution visualization for IT leadership.

SELECTED PROJECT

Bike Companion - Android/Kotlin app that tracks mileage across bikes and components and uses configurable service intervals to surface inspections, cleaning, lubrication, and replacement needs.

EDUCATION

Missouri State University | Bachelor of Science, Computer Science | Dec 2017 | Mathematics Minor
ACM Chapter Treasurer, 2015-2017
